## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 16 and 21-30 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 16 is drawn to methods of detection of any human or mouse Mal1 transcript or polypeptide. The specification as filed only teaches SEQ ID NOS:1-4 as the transcript and polypeptide sequences of human and mouse Mal1. The Mal1 nucleic acid and amino acid sequences are considered to be "essential material" as defined in MPEP 608.01(p)(I)(A). The claims are thus not adequately described for any other Mal1 target sequences. One of skill in the art would not have recognized that applicant was in possession of a representative number of other Mal1 sequences at the time the invention was made.

Furthermore, the specification as filed does not adequately teach the level of Mal1 necessary over a control level for the functions claimed, diagnosing a risk of developing insulin resistance in a human or mouse. The specification as filed teaches a correlation between

decreasing Mal1 levels and development of insulin sensitivity, but does not teach what levels of Mal1 would be expected for a showing of an increase in risk of developing insulin resistance in a human or mouse. As such, the specification as filed has not adequately described the correlation between increased Mal1 levels and the development of insulin resistance.
